50mm Diameter Tube

We have a wide range of components in stock all manufactured from lightweight, corrosion resistant fibreglass in both Yellow and Grey.

The standard installation method is to use stainless steel pop rivets but occasionally customers prefer to use nuts and bolts. Both are stock items. We also stock stainless steel anchor bolts for base fittings.

Just about any size, shape and configuration of handrail can be built using our mouldings and round tube. However, if you have a project which requires a specially shaped moulding to be made then we would be pleased to quote you for low-cost tooling.
